What materials are magnetic?

Prediction

Realised that
what happens
is not, plastic
glad when
one is magnetic.
Not the other way

Method

Put things in the water
have a paper underneath
a magnet. will pull
bits along without
touching the liquid
magnets will
not touch

Results

Wooden blocks: NO
Metal rods: YES
Plastic: NO
Glass: NO
Rubber: NO

Conclusion

found out something was
the same in water, paper,
and what sticks and
not so like some of the
in the water some
metal things will
stick

Conclusion

note that we do
this we could
use other things
to see if they would
also be attracted
magnets.

Well done for
completing your
write up and for
working in a
group

How else could
you set out /
record your
results?
